

Cleary Machinery Company Offers Unique Industry Service

The Cleary Machinery Company, founded by Jack Cleary nearly ten years ago, is a unique service oriented firm that is headquartered in Somerville, New Jersey. Specializing in the sale, rental and service of AGL Lasers, the Cleary firm is well-known for its expertise in the training of laser operators throughout the metropolitan area.

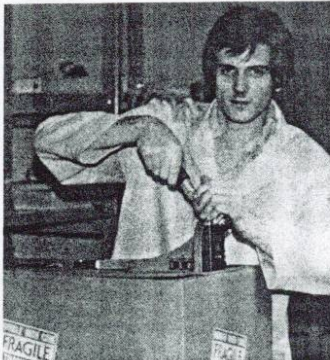

Jack Cleary first began a career in construction twenty-five years ago as a salesman for LeROI Equipment Corporation. Within a few years he progressed to the position as sales and product manager for Pitman Manufacturing which was located in Kansas City, Missouri. During this same period of time, Jack Cleary conducted a number of product and brand management seminars for the American Management Association.

Don Lewis is pictured while fine-tuning an AGL Laser at the Cleary office in Somerville.

In 1969 Jack Cleary returned to the metropolitan area as vice president and general manager of Callahan Equipment Company

After being completely serviced, another laser is readied for shipment by Gerry Cleary.

where he remained for a few years. At about that point in time, the Cleary firm was organized and became a distributor for AGL Corporation. In addition to a heavy involvement with lasers, the company also represents Guest Industries in the sale of asphalt cutters, loader forks and other equipment attachments.

After operating for ten years, Cleary Machinery Company is equally active today in the service as well as sales of lasers. Now that the laser product line has become a necessity in utility construction, Cleary personnel can be found demonstrating equipment, training operators and completely overhauling laser equipment. Cleary has instituted a unique communication system where someone from the company can be reached by telephone at any time, and this aid has proved to be quite helpful. Cleary also flies his own airplane and can reach most service areas in minutes.

Jack Cleary also operates the AGL Service Center-Northeast. The center is offered for the AGL dealers in a fourteen state area, and one of only three such centers in the country. Laserac, a division of Cleary Machinery Company also headquarter in Somerville, produces laser targets and other accessories for various companies. Three years

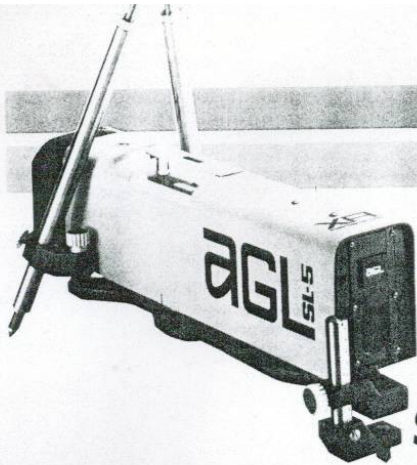

ago, the company purchased the assets of the Dynamet Division of New Hampshire Ball Bearing. The firms product included a rotating laser used in the acoustical ceiling industry. The laser is now marketed as Level Light.

Don Lewis has served as service manager for the Cleary firm for the past year. He is experienced in sales as well as field service and was employed in construction for a number of years. Prior to joining the firm, Don Lewis was a supervisor of quality control in the electronic industry. Gerry Cleary, Jack's son, is employed as service technician and has been working with the firm for four years. Emma Hackenberg, bookkeeper, provides office support to the daily activities of the company.

There is no doubt that the utilization of lasers in recent years has increased productivity and accuracy in pipe laying. Some of Cleary's early accounts included D'Annunzio Brothers, Central Construction, P & A Construction and J & C Excavating. Jack Cleary is particularly pleased about the role that lasers now fill in the utility contracting industry.
